## Assignment -2

# **Python Programming**

Assignment Date	19 September 2022
Student Name	GOKULAKANNAN M
Student Roll Number	913319104021
Maximum Marks	2 Marks

## Question-1:

## **DOWNLOAD THE DATA SET**

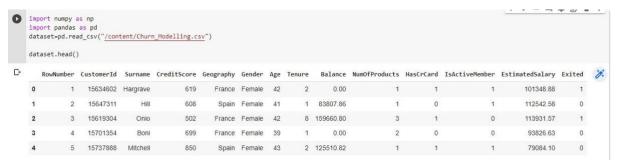

The given data set

#### Question-2:

#### **LOAD THE DATA SET**

#### **Solution:**

import numpy as np
import pandas as pd
dataset=pd.read\_csv("/content/Churn\_Modelling.csv")
dataset.head()

#### Question-3:

# Perform below visualization

- Univariate analysis
- Bivariate analysis
- Multivariate analysis

# **Solution:**

#### **UNIVARIATE ANALYSIS**

**#Calculate Summary Statistics** 

import numpy as np
import pandas as pd
dataset=pd.read\_csv("/content/Churn\_Modelling.csv")
print("mean",dataset['EstimatedSalary'].mean())
print("median",dataset['EstimatedSalary'].median())
print("mode",dataset['EstimatedSalary'].mode())

```
#Calculate Summary Statistics
print("mean",dataset['EstimatedSalary'].mean())
print("median",dataset['EstimatedSalary'].median())
print("mode",dataset['EstimatedSalary'].mode())
```

mean 100090.239881
 median 100193.915
 mode 0 24924.92
 dtype: float64

#### #frequency

dataset['Age'].value\_counts()

```
#frequency
    dataset['Age'].value_counts()

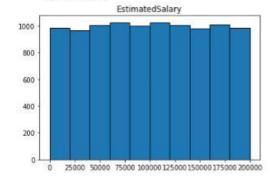

☐ 37

# Question-10:

Split the data into training and testing

Solution:

#### **Xtrain**

```
from sklearn.model_selection import train_test_split
x=km.iloc[:,2:]
y=km.iloc[:,0:2]
X_train, X_test, y_train, y_test = train_test_split(x, y, test_size=0.3, random_state=11)
X_train
```
